Application

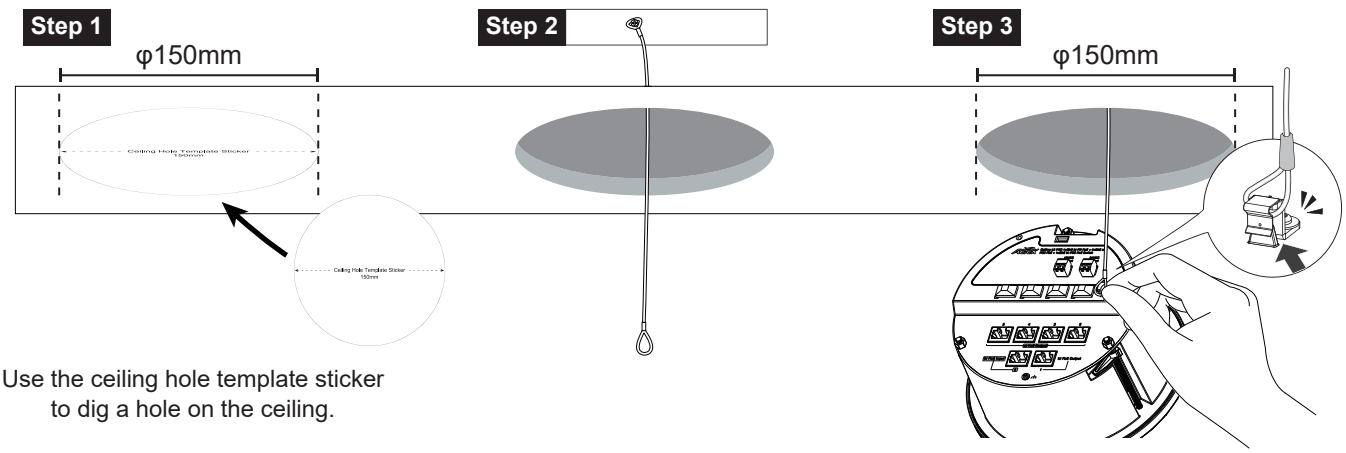

Installation Steps

Installed on the system ceiling

1. Attach the ceiling mount bracket to plasterboard, etc.

- It is recommended to add the fastening screw to the hole size of the ceiling, turn it with a screwdriver to install it. The ceiling thickness that can be connected with the clamping bracket is from 5 to 45 mm.
- The recommended screw torque is 7kgf-cm±3.
- Install on the ceiling with sufficient strength.
- If you have to install it on rock wool ceiling and other weak ceiling panels, please provide enough reinforcement.
- The recommended ceiling opening size is φ150mm.
- The recommended minimum space (height) for ceiling switch installation is 140mm (For Installation and CAT5/6 cable routing.)

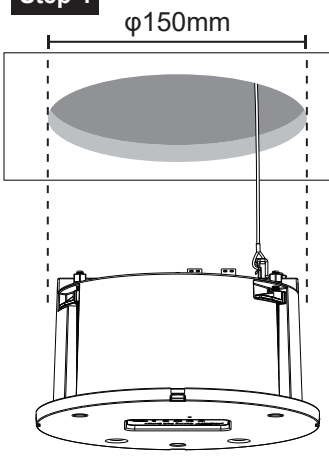

Installation Steps

Use the ceiling hole template sticker to dig a hole on the ceiling.
